

Line Plot for Heights in Your Classroom

Your group will be measuring one another in inches and then comparing data with the rest of the class by putting it in a line plot. Here is an example for a sample group.

x							
x	x				x		x
53	54	55	56	57	58	59	60

The first line on the plot should be of the shortest person and the last should be for the tallest person. Taking data from your group, you can color-code each group and see how they compare with the entire class. Group one would have a red x, group two would have a green x, etc.
